RE: Site Inspection of Cedarstrom Calcite Mine, S/049/012, Utah County, Utah

An inspection was made at the Cedarstrom mine site July 19, 1990. Tony Gallegos and I performed the inspection. We met with Ms. Pauline Pugh, owner of the mine on site. The inspection was conducted to evaluate the site's current status.

The area of disturbance has not changed since the NOI was originally filed. The area equals @ 2.5 acres. The site basically consists of a pad, a portal, some old mill structures, and a new process or mill facility.

The site is located very close to the Ireco Chemical plant. Ireco makes explosives and has been landscaping their property to look like a mine operation. Their site consists of many acres of disturbance and should not be confused with the Cedarstrom site.
